

We care about our environment

Kcrown is an “Eco friendly green” company. We focus on satisfying our customer’s needs and the quality of our products. We pride ourselves on the extra care in designing our paper.

Why choose “Kcrown” products ?

Our company uses only the finest pulp and is rid of any harmful chemicals. Strict incoming quality controls are monitored during the process consistency and performing outgoing quality assurance of all products leaving our premises.

We are always in search of what is new to the market, improving in all aspects. Strategic planning methods are used to develop new innovative concepts within the industry.

Our customers are of high value to us and we regard them as an asset to building and developing Kcrown. Customer’s input is always welcome and we all work together to gain a better knowledge of each other’s needs, creating a more sustainable future for our planet.

We believe you will have total satisfaction because you simply deserve the best.

What is Kcrown Green Choice ?

Kcrown Green Choice is made from sugarcane bagasse and bamboo. Pulp from these resources are significantly more “environmentally friendly” than wood pulp as the carbon harvested is re-absorbed during the next year’s growth, in comparison to tree growth, which is 8 – 12 years.

Sugar is produced from the leaves of the sugarcane plants by a natural process called photosynthesis and is stored as a sweet juice in its fibrous stalks.

After crushing the sugarcane stalks and its juices have been extracted, the remaining cane fibre called Bagasse is then used to manufacture paper. Bagasse can also provide nearly all of the fuel required to power the mills.

Bamboo is a fast growing grass that can be harvested every three years. In fact, Bamboo is one of the fastest growing plants on the planet and it is capable of growing to 100cm or more in a day.

Another benefit of Bamboo is that it is naturally anti-bacterial therefore it doesn’t require any pesticides or fertilizers to ward off insects.

By using these products, you are contributing in saving thousands of trees being cut down, which will damage our environment. With your help, we can create a more sustainable future for our planet.

Instead of burning off emissions which causes pollution, we re-use the sugarcane bagasse and bamboo which assists in creating a healthier environment. Our Green Choice products are soft and have a tensile strength at the same level as pure wood pulp products. It is lint free and no calcium carbonate fillers were added.

We care about our environment

Join in on the Green initiative and be proud that **you** have taken part in creating a better and sustainable future.
